Elsevier

Title Index

Average cost estimation of lot-sizing heuristics, 341

Changing the givens in modelling inventory problems: the example of just-in-time systems, 347
Combinatorial optimization of the location–inventory problem, 273
Comparison of the behavior of Japanese and US inventories, A, 115
Controlled stochastic processes and inventories, 299

Decision support system for materials management, A, 229
Direct tests of the hypothesis that expectations are rational, 49
Does levelling lead to shortages? An empirical test, 5

Electronic data interchange and inventories, 135
Empirical estimation of three models of production and inventory behavior using monthly industry data, 43
Extension of a reliability-type inventory model to Just-in-Time systems, 319

Forming the material supply structure through the choice of the production cooperation range, 237

Heavy-traffic inventory–production systems, 283
Hierarchical production planning and multi-echelon inventory management, 257
Hypergame analysis of the stability of relationships between computerbased logistics systems, 303

Incremental order quantity for the case of very lumpy demand, 367
Intertemporal generalization of the relationship between material requirements planning and input–output analysis, 311
Inventories in macroeconomic fluctuations: the stylized facts, 107
Inventories in the economy in transition, 19
Inventory investment decision and firm value: a conceptual framework, The, 193
Inventory investment equation: an empirical work using business survey data, The, 79

Linear model for Bulgarian inventory investment between 1962 and 1985, 13

Minimum cost allocation of supply centers with limitation on time delivery, 353
Mixed model assembly simulation, 161
Multiple batch structures in throughput scheduling, 359

Observation errors and inventory cycles, 99
Order point/order quantity models with random yield, 297
Overview of the state and problems of inventory management in Finland, An, 217

Performance optimization of a system through the transitive interaction between its sections, 293
Perturbed inventory systems with delays, 277
Principal economic decisions of operational production management in Czechoslovak enterprises of electrotechnical industry, 243
Production lot sizing with work-in-process considerations in response to periodic demand, 145

Relationship of work-in-process inventories, manufacturing lead times and waiting line analysis, The, 221
Relativity of the "new logistic technologies" and of their inventory aspects, 181

Short term inventory and employment interplay in Finnish manufacturing industry, 61
Simplicity, totality and change: a logistic viewpoint in inventory management, 173
Simulating a 100% Just-in-Time economy, 71
Simulation study of bottleneck scheduling, A, 187
Simulation-based method to aid the improvement of manufacturing flexibility, A, 153
Simulation of inventory control systems, 125
Single facility, multi-item lot sizing under Just-in-Time and "cyclic scheduling for improvement", 333
Some issues on the modelling of incentives for special sales, 267
Stimulating the impact of process capability on lot sizes in batch manufacturing, 203
Stochastic inventory problem with piecewise quadratic costs, A, 327
Strategic inventory management of renewable energy resources. Aluminium as an energy storage medium and market commodity, 211
System implications of pure manufacturing policy options, The, 247

Test of the linear rational expectations equilibrium inventory model in the EEC, A, 25

Using mixed frequency data to improve macroeconomic forecasts of inventory investment, 33

Weather-induced instability in agricultural produce with respect to buffer stocks in India and Iran: an integrated optimisation and dynamic input–output model, 89
Work in process: performance measures, 169
